# Product Features

## Marine AR

The Marine AR is a further advanced anti reflective coating specially developed for the harsh environment which is found in marine applications and offshore environments. The Marine AR coating reduces light reflections to an absolute minimum and has an exceptional UV

and saltwater resistance. Typical applications are radars, fish finders, navigation and communication systems exposed to saltwater and sunlight. The Marine AR is also widely used in hospital environments because of its great resistance to disinfectants and cleaning agents used in this environment.

## Technical Data

Transmission, typical	Up to 99%
Reflection	<1 %, single sided
Base materials	Solaris™ Acrylic Cleartech™
Thicknesses	2 & 5 mm

\* Other thicknesses available upon request. MOQ applies
