

Wet AR
Cost effective
anti-reflective (AR)

Technical Specifications

Wet AR

The WET AR anti reflective coating is a cost effective alternative to the exclusive vacuum deposited anti reflection solution. WET AR has a precise colour reproduction and is easy to clean. Furthermore, it has excellent chemical and wear and

abrasion resistance. It is a highly recommendable choice for a wide range of applications e.g. large window applications such as information displays, and applications in public environments where irregular and rough cleaning is standard.

Technical Data

Transmission, typical	Up to 99%
Reflection	<1 %, single sided
Base materials	PMMA
Thicknesses	2 & 3 mm
